QUALITY: THE PROOF IS IN THE PROCESS.

From our capacitors to our direct replacement appliance parts, we own the manufacturing process with 100% control. Whether we are manufacturing in our facilities in the United States or abroad, our sophisticated processes are designed to reduce defects and allow for the flexibility to design around complications.

GETTING TECHNICAL

In addition to 100% capacitance testing, a portion of our capacitor production undergoes accelerated life conditions. Placed in ovens reaching over 85°C, voltage is continuously applied in a formula designed to simulate 60,000 or 100,000 hours of life. Final assembly is completed in a deep vacuum which eliminates all moisture.

We use CNC machines to manufacture most of our A-1® Access Fittings. These sophisticated metal lathes form metal parts and cut threads out of solid rods. Computerization ensures that each and every part is cut to the same specification with the same pressure.

Each and every OEM direct replacement and universal ice maker we manufacture is tested through a 24-hour cycle. Results are fed into computerized systems which are sensitive enough to detect and alert for marginal performance against the documented specifications, fit and function.

EXCLUSIVE MANUFACTURING

CAM-STAT®

Strategic growth led to our acquisition of the end-to-end manufacturing rights of long-standing brands in the HVACR industry, such as our line of A-1® access fittings and service valves. We are also the only industry manufacturer of the complete line of CAM-STAT® OEM heating fan and limit controls, which we make in our Allenwood, New Jersey facility using proprietary equipment.

Our technician-focused line of innovative tools are one-of a kind, resourceful solutions that make life in the HVAC field easier. These unique tools have been designed by real technicians who've used their resourcefulness in the field to solve common problems and approached Supco to help bring their inventions to life through engineering, manufacturing and distribution. Some of our notable TradeFox™ Tools include the Jones® Valve Condensate Cleanout, the Magnecover™ Magnetic Umbrella and the Attic Pro® Utility Lift.

OUR BRAND PROMISE

When our customers see the Supco® brand, they can expect high-quality, innovative manufacturing at value-driven prices. Central to our promise is our commitment to stay true to our values of integrity, dependability and partnership when it comes to how we do business with our customers.
