The Perfect Temperature

IN EVERY ROOM

Flair Bridge

A dedicated plug and play **networking device** for Flair systems.

FEATURES

- Superior radio range compared to using Puck(s) as a gateway device.
- All Pucks can be fully wireless.
- Pucks are not required for Smart Vent systems*.
- Ethernet connectivity for easy setup. Wi-Fi also available.

*For temperature based control, a room will need a Puck, remote sensor, or smart thermostat.

CONNECTIVITY

OR

Ethernet

Wi-Fi

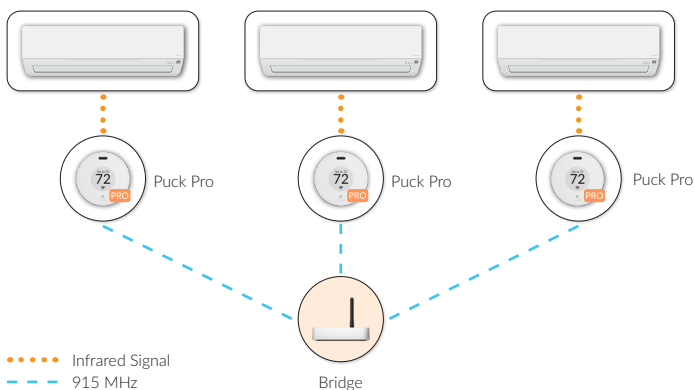

Ethernet connectivity provides:

- A simple solution for 2.4 GHz issues in the field, especially if homeowners are only familiar with their 5 GHz networks.
- Faster setup with no need for Wi-Fi SSIDs or Wi-Fi passwords.
- No homeowner router setting changes or technical configurations.

Wi-Fi is also available, with an improved signal range compared to the Puck.

COMMUNICATION

FOR MINI SPLITS

FOR CENTRAL SYSTEMS
